GALGOTIAS UNIVERSITY, GREATER NOIDA
INDIA
December/2021

SCHOOL OF COMPUTING SCIENCE AND ENGINEERING
GALGOTIAS UNIVERSITY, GREATER NOIDA

CANDIDATE'S DECLARATION

I/We hereby certify that the work which is being presented in the project, entitled **"Portfolio site "**in partial fulfillment of the requirements for the award of B.Tech in AIDS submitted in the School of Computing Science and Engineering of Galgotias University, Greater Noida, is an original work carried out during the period of 2 month, October 2021 – December 2021, under the supervision of Mohd. Anas Assistant Professor, School of Computing Science and Engineering , Galgotias University, Greater Noida

The matter presented in project has not been submitted by me for the award of any other degree of this or any other places.

Sachin Chaudhary(20SCSE1280021)

This is to certify that the above statement made by the candidates is correct to the best of my knowledge.

Mohd. Anas

Assistant Professor

CERTIFICATE

The Final Project Viva-Voce examination of Sachin Chaudhary has been held on

_____ and his/her work is recommended for the award of B.Tech in AIDS

Signature of Examiner(s)   **Signature of Supervisor(s)**

Signature of Project Coordinator   **Signature of Dean**

Date: December,2021

Place: Greater Noida

Abstract

In this era of digital revolution, when everything is at the tip of your finger, designing has occupied a crucial position. For Designers and Artist, the internet is a great place to showcase their work. With online portfolio websites you can reach to a wider-ranging audience from potential clients to buddies to partners to work with. Some of the best portfolio site that are the major problem for me are :-

1.Dribbble
Aiming at bringing the designer community closer, Dribble was launched in 2009. This designer's Facebook keeps its clients as well as freelance designers constantly updated with the latest works.

2. Behance
Since its foundation, Behance has worked in the direction of strengthening the innovative genre. This New York based firm provides an online platform to discover and display fresh designs.

To overcome these famous portfolio site, I have to looks at these points .

1.)   Let the work do the talking.
The best portfolio sites simply frame the actual work. The less distracting that 'frame' is, the better. More often than not, over fussy, loud, cluttered portfolio sites are over-compensating for mediocre work. Simple is always best.

2.) Simple, clean and to the point.

Easy to study and navigate. People will spend seconds looking through your website! Make it easy to scan and view your (best) work.

3.) Value quality, not quantity.

Consider the phrase: 'You are only as good as your last project...'. A user will likely only view one or two projects, so lead with your best work, not all your work! Especially digital has a short shelf life, so showing work from a few years ago isn't valuable, unless it's a high profile project, in which case it's certainly worth highlighting that you worked on it.

4.) Share your process.

Design is more than making things pretty. Showing that your work is considered and well thought out is important for three reasons:

1. It demonstrates the value in what you do. How many times has a client asked you to 'just' do something, like it's nothing?! You know exactly what I mean. There *is* more to what you do...

2. It's interesting to clients and other creatives to see or read about how and why something was created.

3. Creatives hiring creatives want to see your thinking. Designers are problem solvers. What was the problem, and how did you solve it?

Tools and Technology Used:-

We can use GOOGLE SITES ,WEEBLY ,GOOGLE SLIDES , SEESAW .

1	Introduction	8

Conclusion:

Defining portfolio inclusion criteria is essential for effective portfolio management. This practice delineates a group of projects based on their scope, stage of development, revenue size or strategic alignment. It does not limit the portfolio, but enables the organization to define portfolio ownership and focus on the most critical investment opportunities.

Scope of Portfolio Management:

Monitoring the performance of portfolio by incorporating the latest market conditions. Identification of the investor's objective, constraints and preferences. Making an evaluation of portfolio income (comparison with targets and achievement). Making revision in the portfolio.

List of Table

Introduction:

A portfolio is a systematic collection of student work that represents student activities, accomplishments, and achievements over a specific period of time in one or more areas of the curriculum. There are two main types of portfolios:

Showcase Portfolios: Students select and submit their best work. The showcase portfolio emphasizes the products of learning.

Developmental Portfolios: Students select and submit pieces of work that can show evidence of growth or change over time. The growth portfolio emphasizes the process of learning.

students' reflective essay: In both types of portfolios, students write reflective essays or introductory memos to the faculty/assessment committee to explain the work and reflect on how the collection demonstrates their accomplishments, explains why they selected the particular examples, and/or describes changes in their knowledge/ability/attitude.

Formulation of Problem:

a) Addressing the wrong audience

We need to consider what a potential client or employer will be looking for and how they'll be viewing your portfolio, which will usually be completely different from a friend or colleague.

b) Too much work on show

Potential clients and employers don't wish to spend ages trawling through your back catalogue until they find something they like. They're more likely to glance at one or two pieces, and make a snap decision. So you need to be ruthless in selecting only your absolute best work and putting it front and centre.

c) Lack of context

There's no point in just posting visuals by themselves, with no explanation of the context for which they were created.

d) A lack of purpose

Many portfolio websites avoid making the previous obvious mistakes but are still failures because it's just not clear what they're trying to achieve.

e) It doesn't work on mobile

The best way for someone to view your portfolio is always going to be on a big, beautiful widescreen monitor (see our best ultrawide monitors). But you can't guarantee that's what will happen.
These days, it's increasingly likely that potential clients and employers will be viewing your portfolio site on mobile devices. We need to make sure it's not going to look awful on a small screen.

Tool and Technology Used:

1. Kidblog

This is an excellent tool which was actually built by teachers with online student portfolios in mind. Kidblog is a unique proposition in the sense that it aims to empower teachers to fully embrace the advantages of the digital revolution in education by allowing students to become creators, not mere consumers of knowledge. Kidblog offers functionalities which perfectly match the goals of online student portfolios.

2. Edublogs

At a first glance, Edublogs seems to offer a similar blogging platform to WordPress, but it differs in its core character as a tool meant exclusively for students. What does it mean in practice? Simpler interface and full functionality. Edublogs is a secure platform where blogs can be private or accessible to teachers, classmates and parents.

3. Weebly

Weebly is a platform which helps students to create websites with the use of specific visual templates. As you can imagine, this tool can easily serve as a digital portfolio creator, helping students to navigate through its simple interface and easily update their portfolios. Students can add content with a simple drag-and-drop – this means that the tool will work for younger students. Weebly offers a look into portfolios made by other students as well, helping to inspire students and their peers in creating captivating online spaces.

4. Google Sites

you're already using Google Apps for Education at your institution, choosing Google Sites as your go-to tool for creating engaging student portfolios will be only natural. Google Sites

offers an interface enabling students to create comprehensive and varied collections of multimedia materials to craft a narrative of their work throughout the school year. The tool provides site templates, so students won't need to work on the site structure at all. All they need to do is integrate their site with other Google apps to create their online portfolios. Since it's a Google product, you can expect Google Sites to seamlessly integrate with other tools like YouTube, Blogger or Slides. Naturally, it will be part of a student's Google Apps account, so teachers will have full administrative control over how sites are being used and their accessibility to the public.

5. HTML

HTML is a *markup language* that defines the structure of your content. HTML consists of a series of elements, which you use to enclose, or wrap, different parts of the content to make it appear a certain way, or act a certain way. The enclosing tags can make a word or image hyperlink to somewhere else, can italicize words, can make the font bigger or smaller, and so on. For example, take the following line of content

6. CSS

Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML. CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript.

CSS is designed to enable the separation of presentation and content, including layout, colors, and fonts. This separation can improve content accessibility; provide more flexibility and control in the specification of presentation characteristics; enable multiple web pages to share formatting by specifying the relevant CSS in a separate

7. JAVA SCRIPT

JavaScript (JS), is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS. Over 97% of websites use JavaScript on the client side for web page behavior, often incorporating third-party libraries. All major web browsers have a dedicated JavaScript engine to execute the code on the user's device.

JavaScript is a high-level, often just-in-time compiled language that conforms to the ECMAScript standard.[15] It has dynamic typing, prototype-based object-orientation, and first-class functions.
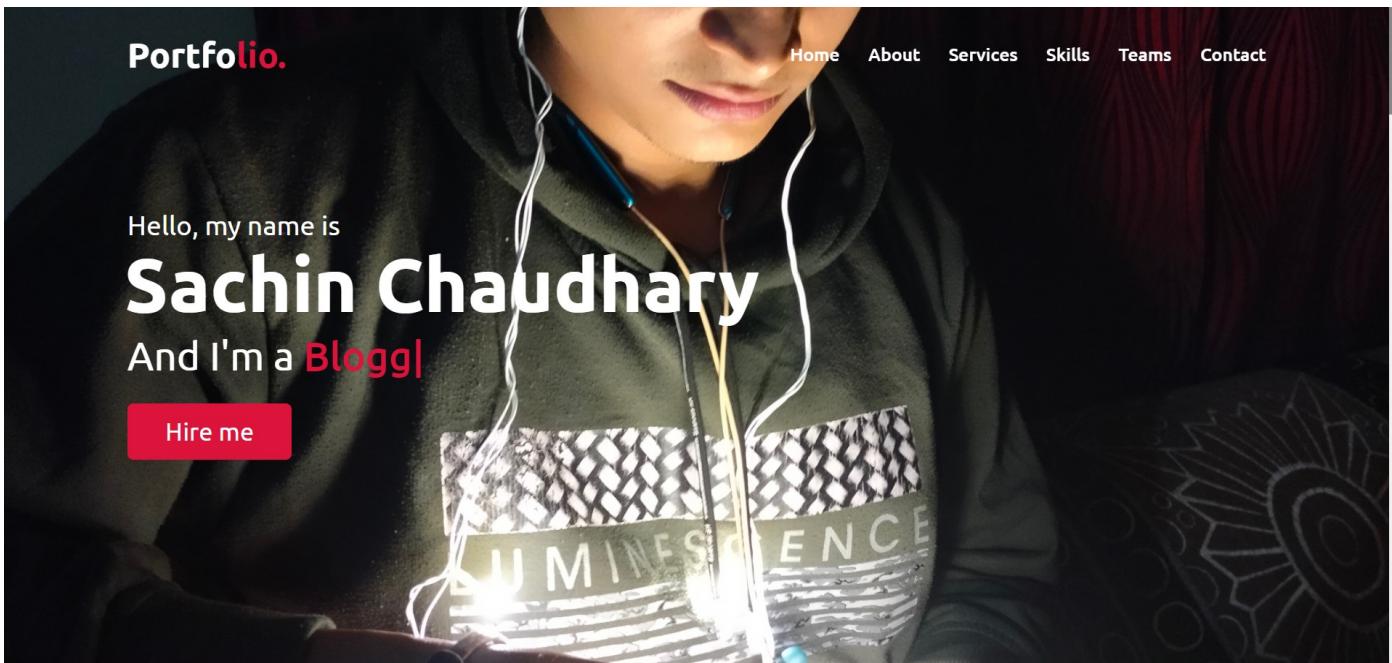

Literature Survey:

With the sea of applicants, you are able to stand out if you have the appropriate and professional portfolio that clients are able to see. In the creative industry including photographers, designers, or artists having a stunning portfolio is a must. This will help in self-promotion.

Online portfolios are a common form of assessment in fully online learning environments and have been used in multiple disciplines in higher education . Online portfolios can be used as summative assessments and can be aligned to learning goals, including goals related to higher order cognitive skills .Google Sites is one of several platforms used by instructors to include online portfolios in their courses . Further, by infusing creativity into the portfolio activities, the portfolio approach can increase students' motivation and engagement .

In this era of digital revolution, when everything is at the tip of your finger, designing has occupied a crucial position. For Designers and Artist, the internet is a great place to showcase their work. With online portfolio websites you can reach to a wider-ranging audience from potential clients to buddies to partners to work with.

CHAPTER 3

Working of Project:

How does a portfolio website work?
Image result for working of portfolio site
At its most basic form, a portfolio website provides professional information about an individual or a company and presents a showcase of their work. ... To supply site visitors with information about the individual or company. To showcase work.

Souce code:

```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Personal Portfolio Website</title>
    <link rel="stylesheet" href="style.css">
    <link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/font-awesome/5.15.3/css/all.min.css"/>
    <script src="https://code.jquery.com/jquery-3.5.1.min.js"></script>
    <script src="https://cdnjs.cloudflare.com/ajax/libs/typed.js/2.0.11/typed.min.js"></script>
    <script src="https://cdnjs.cloudflare.com/ajax/libs/waypoints/4.0.1/jquery.waypoints.min.js"></script>
    <script src="https://cdnjs.cloudflare.com/ajax/libs/OwlCarousel2/2.3.4/owl.carousel.min.js"></script>
```

```html
    <link rel="stylesheet"
href="https://cdnjs.cloudflare.com/ajax/libs/OwlCarousel2/2.3.4
/assets/owl.carousel.min.css"/>

</head>
<body>
    <div class="scroll-up-btn">
        <i class="fas fa-angle-up"></i>
    </div>
    <nav class="navbar">
        <div class="max-width">
            <div class="logo"><a

CHAPTER 5

Conclusion:

The online portfolio project was designed to allow students to both explore science that intrigues them and demonstrate their ability to evaluate the course materials in a manageable and forgiving medium considering the acuteness of the COVID-19 pandemic. An advantage of the online portfolio is its structured, manageable, weekly tasks. The temporal spacing of the workload allowed students to meaningfully engage with the content in an approachable manner, without the acute stress of a standard research paper.

The compartmentalization of the online portfolio was designed so that each week's assignment would build on the prior work, creating a clear through-line and connecting the assignment to the learning objectives of the course. Additionally, the weekly structure of the novel assessment created natural checkpoints for students to provide feedback on their classmates' progress. This resulted in community building through helping others improve the quality and clarity of their work.

Future Scope:

Organizational scope refers to the boundaries or limits of the portfolio. ... In fact, this department is commonly included in the first portfolio of many organizations.) In other cases, the portfolio may be applied across the entire company.

Portfolio management is a continuous process. It is a dynamic activity. The following are the basic operations of a portfolio management.

   a) Monitoring the performance of portfolio by incorporating the latest market conditions.

b) Identification of the investor's objective, constraints and preferences.

c) Making an evaluation of portfolio income (comparison with targets and achievement).

d) Implementation of the strategies in tune with investment objectives.
