

Program: BCA - IOP

Course Code: BCAS3031

Course Name: PL/SQL & Cursors and

Triggers

Dr. T. Poongodi Associate Professor

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Initialize Variables

It is a good programming practice to initialize variables properly otherwise, sometimes programs would produce unexpected results.

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

```
DECLARE
 a integer := 10;
 b integer := 20;
 c integer;
 f real;
BEGIN
 c := a + b;
 dbms_output.put_line('Value of c: ' | | c);
 f := 70.0/3.0;
 dbms_output.put_line('Value of f: ' | | f);
END;
Value of c: 30
```

PL/SQL procedure successfully completed.

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Variable Scope in PL/SQL

- PL/SQL allows the nesting of blocks, i.e., each program block may contain another inner block.
- If a variable is declared within an inner block, it is not accessible to the outer block.
- However, if a variable is declared and accessible to an outer block, it is also accessible to all nested inner blocks. There are two types of variable scope –
- Local variables Variables declared in an inner block and not accessible to outer blocks.
- Global variables Variables declared in the outermost block or a package.

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

```
DECLARE
 -- Global variables
 num1 number := 95;
 num2 number := 85;
BEGIN
 dbms_output.put_line('Outer Variable num1: ' | | num1);
 dbms_output.put_line('Outer Variable num2: ' | | num2);
 DFCLARE
   -- Local variables
   num1 number := 195;
   num2 number := 185;
 BEGIN
   dbms_output.put_line('Inner Variable num1: ' | | num1);
   dbms_output.put_line('Inner Variable num2: ' | | num2);
 END;
END;
```

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Outer Variable num1: 95

Outer Variable num2: 85

Inner Variable num1: 195

Inner Variable num2: 185

PL/SQL procedure successfully completed.

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Assigning SQL Query Results to PL/SQL Variables

- Use the SELECT INTO statement of SQL to assign values to PL/SQL variables.
- For each item in the SELECT list, there must be a corresponding, type-compatible variable in the INTO list.

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Create a table named CUSTOMERS,

```
CREATE TABLE CUSTOMERS(
 ID INT NOT NULL,
 NAME VARCHAR (20) NOT NULL,
 AGE INT NOT NULL,
 ADDRESS CHAR (25),
 SALARY DECIMAL (18, 2),
 PRIMARY KEY (ID)
```

Table Created

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Insert some values in the table, INSERT INTO CUSTOMERS (ID,NAME,AGE,ADDRESS,SALARY) VALUES (1, 'Ramesh', 32, 'Ahmedabad', 2000.00);

INSERT INTO CUSTOMERS (ID, NAME, AGE, ADDRESS, SALARY) VALUES (2, 'Khilan', 25, 'Delhi', 1500.00);

INSERT INTO CUSTOMERS (ID, NAME, AGE, ADDRESS, SALARY) VALUES (3, 'kaushik', 23, 'Kota', 2000.00');

INSERT INTO CUSTOMERS (ID, NAME, AGE, ADDRESS, SALARY) VALUES (4, 'Chaitali', 25, 'Mumbai', 6500.00);

INSERT INTO CUSTOMERS (ID, NAME, AGE, ADDRESS, SALARY) VALUES (5, 'Hardik', 27, 'Bhopal', 8500.00);

INSERT INTO CUSTOMERS (ID, NAME, AGE, ADDRESS, SALARY) VALUES (6, 'Komal', 22, 'MP', 4500.00);

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Assigns values from the above table to PL/SQL variables using the **SELECT INTO** clause of SQL,

```
DECLARE
 c id customers.id%type := 1;
 c name customers.name%type;
 c addr customers.address%type;
 c sal customers.salary%type;
BEGIN
 SELECT name, address, salary INTO c_name, c_addr, c_sal
 FROM customers
 WHERE id = c id;
 dbms_output.put_line
 ('Customer ' | | c_name | | ' from ' | | c_addr | | ' earns ' | | c_sal);
END;
```

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Customer Ramesh from Ahmedabad earns 2000 PL/SQL procedure completed successfully

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Declaring a Constant

A constant is declared using the **CONSTANT** keyword. It requires an initial value and does not allow that value to be changed.

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

```
PI CONSTANT NUMBER := 3.141592654;
DECLARE
           -- constant declaration
           pi constant number := 3.141592654;
           -- other declarations
           radius number(5,2);
           dia number(5,2);
           circumference number(7, 2);
           area number (10, 2);
BEGIN
           -- processing
           radius := 9.5;
           dia := radius * 2;
           circumference := 2.0 * pi * radius;
           area := pi * radius * radius;
           -- output
           dbms_output.put_line('Radius: ' | | radius);
           dbms output.put line('Diameter: ' | | dia);
           dbms output.put line('Circumference: ' | | circumference);
           dbms output.put line('Area: ' | | area);
END;
```

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Radius: 9.5

Diameter: 19

Circumference: 59.69

Area: 283.53

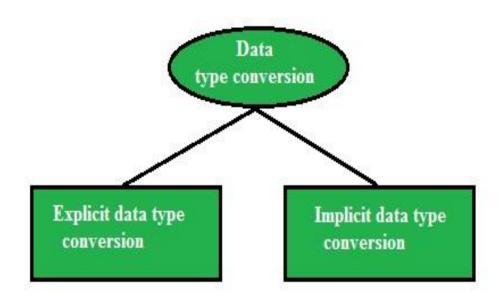

PI/SQL procedure successfully completed.

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Data type conversion

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

- Server uses data of one type where it expects data of a different data type.
- Server can automatically convert the data to the expected data type.
- This data type conversion can be done implicitly by the Server, or explicitly by the user.

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Implicit Data-Type Conversion:

Data is converted from one type to another implicitly (by itself/automatically)

FROM	то
VARCHAR2 or CHAR	NUMBER
VARCHAR2 or CHAR	DATE
DATE	VARCHAR2
NUMBER	VARCHAR2

Program Name:

GALGOTIAS
UNIVERSITY
Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

SELECT employee_id,first_name,salary FROM employees
WHERE salary > 15000;

EMPLOYEE_ID	FIRST_NAME	SALARY
100	Steven	24000
101	Neena	17000
102	lex	17000

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

SELECT employee_id,first_name,salary FROM employees WHERE salary > '15000';

EMPLOYEE_ID	FIRST_NAME	SALARY
100	Steven	24000
101	Neena	17000
102	lex	17000

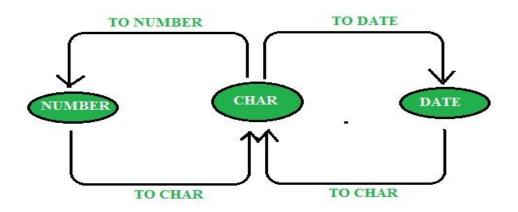

Output of both queries came out to be same, inspite of 2nd query using '15000' as text, it is automatically converted into int data type.

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Explicit Data-Type Conversion:

Explicit Data Type Converson

Program Name: Program Code:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

TO_CHAR Function:

TO_CHAR function is used to typecast a numeric or date input to character type with a format model (optional).

- Must be enclosed in single quotation marks and is case sensitive
- Can include any valid date format element

TO_CHAR(date, 'format_model')

Program Name:

GALGOTIAS
UNIVERSITY

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

```
SELECT employee_id, TO_CHAR(hire_date, 'MM/YY')
Month_Hired FROM employees
WHERE last_name = 'Higgins';
```

EMPLOYEE_ID	MONTH_HIRED
205	06/94

GALGOTIAS

IINIVERSITY

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

TO_CHAR Function with Numbers:

Use with the TO CHAR function to display a number value as a character.

```
TO CHAR(number, 'format_model')
```

```
SELECT TO CHAR(salary, '$99,999.00') SALARY FROM employees
WHERE last name = 'Ernst';
```

SALARY

\$5000

Program Name:

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

Using the TO_NUMBER and TO_DATE Functions:

Convert a character string to a number format using the **TO_NUMBER** function :

```
TO_NUMBER(char[, 'format_model'])
```

Convert a character string to a date format using the **TO_DATE** function:

```
TO_DATE(char[, 'format_model'])
```

Course Code: BCAS3031 Course Name: PL/SQL & Cursors and Triggers

These functions have an **fx** modifier. This modifier specifies the exact matching for the character argument and date format model of a **TO_DATE** function.

```
SELECT last_name, hire_date FROM employees WHERE hire_date =
TO_DATE('May 24, 1999', 'fxMonth DD, YYYY');
```

LASTNAME	HIREDATE
Kumar	24-MAY-99
