

# School of Basic and Applied Sciences

Course Code : BSCC2003

Course Name: Inorganic Chemistry II

The logo of Galgotias University is a stylized 'G' composed of three curved, overlapping bands in shades of yellow, blue, and red. It is centered on the page.

BRONSTED LOWRY: CONJUGATE ACID BASE PAIR

GALGOTIAS  
UNIVERSITY

# PREREQUISITES

- Arrhenius concept of acids and bases.
- Hydrogen donor and acceptor species

The logo of Galgotias University is a stylized, circular emblem. It features a central blue wave-like shape that curves upwards and to the right. This central element is surrounded by several concentric, overlapping bands of color, including shades of yellow, orange, and red, creating a sense of motion and energy.

GALGOTIAS  
UNIVERSITY

# LEARNING OUTCOMES

- Knowledge of Lowry concept of acids and bases
- Conjugated acid base pair concept

A large, faint watermark logo of Galgotias University is centered in the background. It features a stylized 'G' composed of three overlapping, curved shapes in shades of yellow, blue, and pink.

GALGOTIAS  
UNIVERSITY

# Brønsted-Lowry Acids and Bases

What distinguishes an acid from a base in the Brønsted-Lowry theory?

GALGOTIAS  
UNIVERSITY

## Brønsted-Lowry Acids and Bases

Sodium carbonate ( $\text{Na}_2\text{CO}_3$ ) and ammonia ( $\text{NH}_3$ ) act as bases when they form aqueous solutions.

- Neither of these compounds is a hydroxide-containing compound, so neither would be classified as a base by the Arrhenius definition.

## Brønsted-Lowry Acids and Bases

In 1923, the Danish chemist Johannes Brønsted and the English chemist Thomas Lowry were working independently.

- Each chemist proposed the same definition of acids and bases.

## Brønsted-Lowry Acids and Bases

According to the Brønsted-Lowry theory, an acid is a hydrogen-ion donor and a base is a hydrogen-ion acceptor.

- This theory includes all the acids and bases that Arrhenius defined.
- It also includes some compounds that Arrhenius did not classify as bases.

## Brønsted-Lowry Acids and Bases

You can use the Brønsted-Lowry theory to understand why ammonia is a base.

- When ammonia dissolves in water, hydrogen ions are transferred from water to ammonia to form ammonium ions and hydroxide ions.

GALGOTIAS  
UNIVERSITY

## Brønsted-Lowry Acids and Bases

You can use the Brønsted-Lowry theory to understand why ammonia is a base.

- When ammonia dissolves in water, hydrogen ions are transferred from water to ammonia to form ammonium ions and hydroxide ions.

- Ammonia is a Brønsted-Lowry base because it accepts hydrogen ions.
- Water is a Brønsted-Lowry acid because it donates hydrogen ions.

## Brønsted-Lowry Acids and Bases

### Conjugate Acids and Bases

When the temperature of an aqueous solution of ammonia is increased, ammonia gas is released.

- $\text{NH}_4^+$  reacts with  $\text{OH}^-$  to form more  $\text{NH}_3$  and  $\text{H}_2\text{O}$ .
- In the reverse reaction, ammonium ions donate hydrogen ions to hydroxide ions.
  - $\text{NH}_4^+$  (the donor) acts as a Brønsted-Lowry acid, and  $\text{OH}^-$  (the acceptor) acts as a Brønsted-Lowry base.

# Brønsted-Lowry Acids and Bases

## Conjugate Acids and Bases

In essence, the reversible reaction of ammonia and water has two acids and two bases.

GALGOPIAS  
UNIVERSITY

## Brønsted-Lowry Acids and Bases

### Conjugate Acids and Bases

A **conjugate acid** is the ion or molecule formed when a base gains a hydrogen ion.

- $\text{NH}_4^+$  is the conjugate acid of the base  $\text{NH}_3$ .

GALGOTIAS  
UNIVERSITY

# Brønsted-Lowry Acids and Bases

## Conjugate Acids and Bases

A **conjugate base** is the ion or molecule that remains after an acid loses a hydrogen ion.

- $\text{OH}^-$  is the conjugate base of the acid  $\text{H}_2\text{O}$ .

GALGOPIAS  
UNIVERSITY

# Brønsted-Lowry Acids and Bases

## Conjugate Acids and Bases

Conjugate acids are always paired with a base, and conjugate bases are always paired with an acid.

- A conjugate acid-base pair consists of two ions or molecules related by the loss or gain of one hydrogen ion.

GALGOTIAS  
UNIVERSITY

## Conjugate Acids and Bases

- The ammonia molecule and the ammonium ion are a conjugate acid-base pair.
- The water molecule and the hydroxide ion are also a conjugate acid-base pair.

# Brønsted-Lowry Acids and Bases

## Conjugate Acids and Bases

In this reaction, hydrogen chloride is the hydrogen-ion donor and is by definition a Brønsted-Lowry acid. Water is the hydrogen-ion acceptor and a Brønsted-Lowry base.

- The chloride ion is the conjugate base of the acid HCl.
- The hydronium ion is the conjugate acid of the water base.

# Brønsted-Lowry Acids and Bases

## Conjugate Acids and Bases

The figure below shows the reaction that takes place when sulfuric acid dissolves in water.

- The products are hydronium ions and hydrogen sulfate ions.
- Use the figure to identify the two conjugate acid-base pairs.

Some Conjugate  
Acid-Base Pairs

Acid	Base
HCl	Cl <sup>-</sup>
H <sub>2</sub> SO <sub>4</sub>	HSO <sub>4</sub> <sup>-</sup>
H <sub>3</sub> O <sup>+</sup>	H <sub>2</sub> O
HSO <sub>4</sub> <sup>-</sup>	SO <sub>4</sub> <sup>2-</sup>
CH <sub>3</sub> COOH	CH <sub>3</sub> COO <sup>-</sup>
H <sub>2</sub> CO <sub>3</sub>	HCO <sub>3</sub> <sup>-</sup>
HCO <sub>3</sub> <sup>-</sup>	CO <sub>3</sub> <sup>2-</sup>
NH <sub>4</sub> <sup>+</sup>	NH <sub>3</sub>
H <sub>2</sub> O	OH <sup>-</sup>

## Brønsted-Lowry Acids and Bases

### Amphoteric Substances

Note that water appears in both the list of acids and the list of bases.

- Sometimes water accepts a hydrogen ion.
- At other times, it donates a hydrogen ion.
- How water behaves depends on the other reactant.

#### Some Conjugate Acid-Base Pairs

Acid	Base
HCl	Cl <sup>-</sup>
H <sub>2</sub> SO <sub>4</sub>	HSO <sub>4</sub> <sup>-</sup>
H <sub>3</sub> O <sup>+</sup>	H <sub>2</sub> O
HSO <sub>4</sub> <sup>-</sup>	SO <sub>4</sub> <sup>2-</sup>
CH <sub>3</sub> COOH	CH <sub>3</sub> COO <sup>-</sup>
H <sub>2</sub> CO <sub>3</sub>	HCO <sub>3</sub> <sup>-</sup>
HCO <sub>3</sub> <sup>-</sup>	CO <sub>3</sub> <sup>2-</sup>
NH <sub>4</sub> <sup>+</sup>	NH <sub>3</sub>
H <sub>2</sub> O	OH <sup>-</sup>

## Amphoteric Substances

A substance that can act as either an acid or a base is said to be **amphoteric**.

- Water is amphoteric.
  - In the reaction with hydrochloric acid, water accepts a proton and is therefore a base.
  - In the reaction with ammonia, water donates a proton and is therefore an acid.

**How can one substance, such as water, be both an acid and a base, according to the Brønsted-Lowry definition?**

GALGOTIAS  
UNIVERSITY

**How can one substance, such as water, be both an acid and a base, according to the Brønsted-Lowry definition?**

*Because water can act as both a hydrogen-ion donator and a hydrogen-ion acceptor, it can act as both an acid and a base according to the Brønsted-Lowry definition.*
